# Start simple

# Be Salt Smart

Healthy eating is important at every age. Eat a variety of fruits, vegetables, grains, protein foods, and dairy or fortified soy alternatives. When deciding what to eat or drink, choose options that are full of nutrients and limited in added sugars, saturated fat, and sodium. Start with these tips:

### Read the label

The Nutrition Facts label shows you how much sodium is in packaged foods. Choose lower sodium foods—especially if you have high blood pressure, diabetes, or kidney disease.

### Eat fruits and veggies

Enjoy a variety of fresh and frozen fruits and vegetables—almost all of them are naturally low in sodium. Look for canned vegetables labeled "no added salt."

### Look for cue words

Items that are "pickled," "brined," or "cured" tend to be high in sodium. Include these foods in your meals sparingly.

### Put together meals at home

Making your own meals gives you more control over the salt you eat. Taste your food before adding salt from the shaker.

#### Go easy on the sauce

Be mindful of how much sauce, gravy, salsa, ketchup, soy sauce, marinade, or dressing you're using. The sodium from these can add up quickly.

### Spice it up

Flavor your foods with fresh or dried herbs and spices instead of salt. Pick spice blends that do not list salt or sodium on the ingredients list.

**Go to MyPlate**.gov for more information. USDA is an equal opportunity provider, employer, and lender.

The benefits of healthy eating add up over time, bite by bite.
